DIGITAL MOULDS GMBH

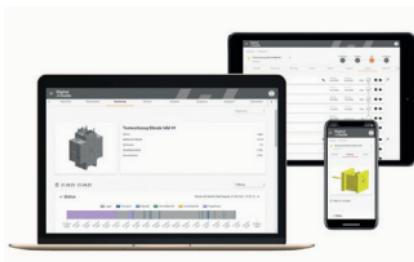

Digital Moulds GmbH, based in Sierning, Austria, offers digitalisation solutions for tool & mould making, mainly in the area of mould monitoring and mould management. The parent companies HAIDLMAIR, an Upper Austrian mould maker, and the Bavarian mould manufacturer Siegfried Hofmann GmbH support Digital Moulds with specialist know-how. The Digital Moulds team has decades of experience in mould making and the production of plastic parts.

MOULD MONITORING

The Software Mould Monitoring allows active and comprehensive mould monitoring as part of the injection moulding process. Numerous relevant mould parameters such as parts counter, cycle time, feed temperature or cavity pressure can be viewed from any location throughout the entire mould life cycle.

MOULD LIFECYCLE MANAGEMENT

Mould Life Cycle Management documents and visualises the entire life cycle of a mould in a transparent and centralised manner - from the initial product idea to the end of its service life. The application collects all relevant information such as documents, drawings and parameters in a database.
